

HMA Supports Medicaid and Behavioral Health Authorities in CCBHC Planning Grants and Demonstrations

HMA offers states a deeply informed yet neutral perspective on Certified Community Behavioral Health Clinic (CCBHC) development. We work with a diverse range of Medicaid and Behavioral Health Authority stakeholders in planning for and implementing the CCBHC model both within the Demonstration Program framework, as well as through a state-run CCBHC initiative. Our team of experts supports states to leverage the CCBHC model to support their overall system transformation goals.

We have helped 17 states successfully write their CCBHC planning grant applications and supported New York state to successfully write their demonstration grant application. In 2022 alone, we supported behavioral health providers attain more than \$110 million in Expansion Grant funding they will use in their communities.

Our team brings expertise in policy, comprehensive experience with Substance Abuse and Mental Health Services (SAMHSA) regulations, CCBHCs, behavioral health treatment and support services, state Medicaid systems, clinical integration, health information technology, quality improvement, healthcare finance, and strategy.

Our team is also working alongside implementers in the day-to-day to see the value of the opportunity unfold.

The HMA team has a national perspective on lessons learned and can offer states support in effectively designing a planning grant. Combined with our 35-year history of supporting states with Medicaid and non-Medicaid policy design, we can help states align the CCBHC opportunity with broader policy initiatives, or system design, to ensure they have a comprehensive approach to using the CCBHC funds and can make a compelling case for the strategy in the planning grant.

The HMA team supports states with:

- » Design considerations and ensuring the CCBHC is aligned with larger strategic priorities
- » Applications for planning grants
- » Implementation support, incorporating lessons learned from CCBHC implementation to date, including successes and challenges
- » PPS design with our actuarial partners

Our CCBHC team will help your agency meet your goals for improving care for individuals living with mental health conditions and substance use disorders, securing federal financing, and planning to maximize the benefit of a statewide CCBHC demonstration program for your state and communities.
