CEUS AND CMES ELIGIBILITY AND DISTRIBUTION

» This series is eligible for both CEUs and CMEs

- » These activities have been approved for CEUs by the Minnesota Board of Behavioral Health and Therapy for 3 hours of credit for LADCs and LPC/LPCCs (total of 12 hours if all four sessions are fully attended)
- » These activities have been approved for CMEs by the American Academy of Family Physicians for 3 hours of credit (total of 12 hours if all four sessions are fully attended)
- » To qualify for CEUs or CMEs, you are required to
- Follow-up questions? Contact Gabriel Velazquez ccollins@healthmanagement.com

- 1. Complete the pre-training guiz
- 2. Be in attendance for the entire session
- 3. Complete the accompanying evaluation survey for each session attended
- 4. Complete the post-training guiz
- » CEU/CME certificates will be issued approximately 1-2 weeks AFTER the completion of the series (Session 4: January 29th).

5

LAND ACKNOWLEDGMENT

Every community owes its existence and vitality to generations from around the world who have contributed their hopes, dreams, and energy to making the history that led to this moment. Some were brought here against their will, some were drawn to leave their distant homes in hope of a better life, and some have lived on this land for more generations than can be counted. Truth and acknowledgment are critical to building mutual respect and connection across all barriers of heritage and difference.

We begin this effort to acknowledge what is buried by honoring the truth. We are standing on the ancestral lands of the Dakota people. We want to acknowledge the Dakota, the Ojibwe (pronounced ow jeeb way), the Ho Chunk, and the other nations of people who also call this place home. We pay respects to their elders past and present.

Please take a moment to consider the treaties made by the Tribal nations that entitle non-Native people to live and work on traditional Native lands. Consider the many legacies of violence, displacement, migration, and settlement that bring us together here today. Please join us in uncovering such truths at any and all public events.*

*This is the acknowledgment given in the USDAC Honor Native Land Guide – edited to reflect this space by Shannon Geshick, MTAG, Executive Director Minnesota Indian Affairs Council

DISPARITIES EXIST AMONG INDIVIDUALS AT RISK OF AND LIVING WITH HIV AS WELL AS INDIVIDUALS WHO HAVE A SUBSTANCE USE DISORDER

HEALTH MANAGEMENT ASSOCIATES

uciates, Inc. At Rights/Reserved.

CULTURAL, RACIAL, AND SEXUAL IDENTITIES

LEARNING OBJECTIVES: CULTURAL, RACIAL, AND SEXUAL IDENTITIES

14

≫Despite prevention efforts,

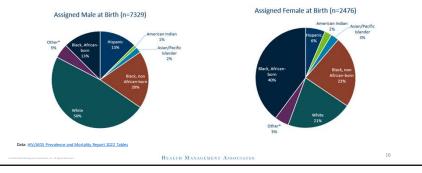

HEALTH DISPARITIES IN HIV

- some groups of people are affected by HIV, viral hepatitis, STIs, and TB more than other groups of people
- The occurrence of these diseases at greater levels among certain population groups more than among others is often referred to as a health disparity
- Social determinants of health like poverty, unequal access to health care, lack of education, stigma, and racism are linked to health disparities
- \gg Differences may occur by:
 - ≫ gender
 - \gg race or ethnicity
 - » education
 - ≫ income
 - ≫ disability
 - \gg geographic location
 - » sexual orientation

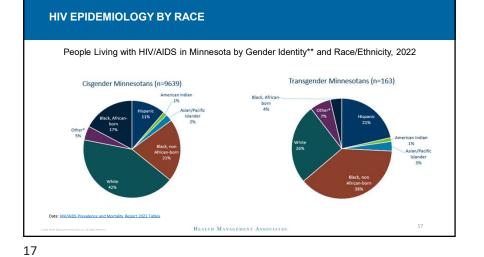

HEALTH MANAGEMENT ASSOCIATES

HIV EPIDEMIOLOGY BY RACE

People Living with HIV/AIDS in Minnesota by Sex Assigned at Birth and Race/Ethnicity, 2022

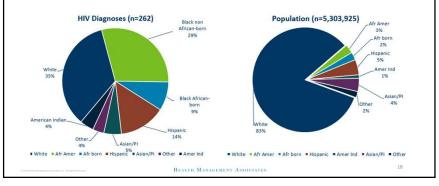

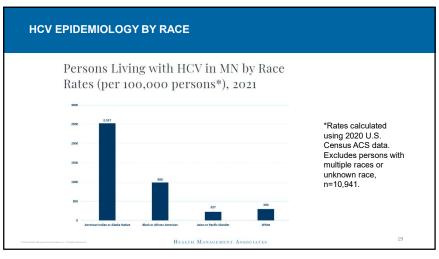

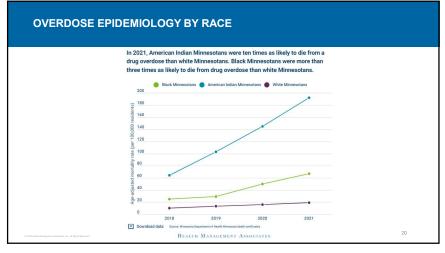

HIV INCIDENCE IN MINNESOTA

HIV Diagnoses* in Year 2022 and General Population in Minnesota by Race/Ethnicity

INTERSECTIONALITY

- Scompounded inequities experienced by individuals and populations who belong to two or more marginalized identities
- >> Impacted by systemic inequities in multiple dimensions
- » Example: Black transgender women are impacted by racism, transphobia, and sexism.

HEALTH MANAGEMENT ASSOCIATES

22

22

SEXUAL AND GENDER MINORITIES AND SUD

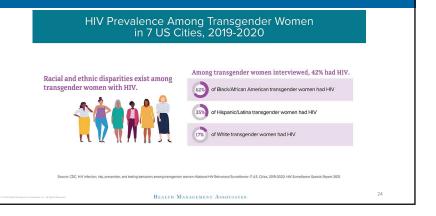

Most recent data from the National Survey on Drug Use and Health (NSDUH, 2015) indicates sexual minorities use substances at the following rates (compared to the overall US population)

USE RATES (sexual minority vs. general population)		
12.4% vs 10.1%		
37.6% vs 16.2%		
9% vs 3.8%		
9% vs 6.4%		

- » Compared to a heterosexual population, sexual and gender minorities:
 - >> Enter treatment with more severe SUD (i.e., persistent)
 - » Have higher rates of co-occurring mental health disorders including mood disorders, self-harm behaviors (e.g., cutting), suicidality
 - » Have a greater risk of HIV infection (men, women and nonbinary)
 - >> There are far more intervention programs designed and evaluated specifically for White Gay men than there are for other sexual or gender minorities

HEALTH MANAGEMENT ASSOCIATES 29

30

CULTURAL CONSIDERATIONS

HEALTH AND STRUCTURAL INEQUITIES

Health inequities

systematic differences in the health status of different population groups

Structural inequities

personal, interpersonal, institutional, and systemic drivers—such as, racism, sexism, classism, able-ism, xenophobia, and homophobia

HEALTH MANAGEMENT ASSOCIATES

THE CONNECTION

	tomb." >> Socioeconomic factors that contribute to poor health >> Social stigma >> Mistrust of the healthcare institution
>>	HIV has had a disproportionate impact on minority communities, and studies have documented a pattern of disparities in care for minorities
>>	This makes the issue of treatment of minorities with HIV a particularly timely and pressing one

HEALTH MANAGEMENT ASSOCIATES

33

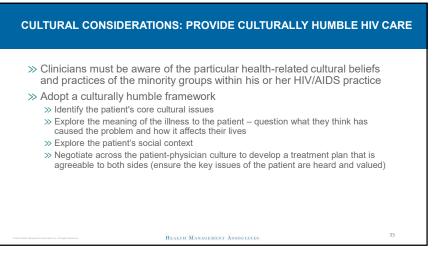

CULTURAL CONSIDERATIONS

How do cultural considerations influence treatment engagement?

"An approach to care that uses a cultural competence framework enhances communication between minority patients and their providers, endeavors to use a more diverse array of staff members, proactively enhances the likelihood of receipt of ART, and uses an evidence-based approach to thinking about adherence will improve the likelihood that minority patients will engage in care, be satisfied with care, and have positive HIV-related outcomes".

HEALTH MANAGEMENT ASSOCIATES

34

CULTURAL CONSIDERATIONS: ENHANCING COMMUNICATION IN CLINICAL CARE

- \gg Research shows that minority patients are less satisfied with their HIV/AIDS care than are other patients
- > Although many issues may contribute to this lower satisfaction, one issue that comes up repeatedly is *patient-provider communication*
- Minority patients report that they needed more time to make HIV treatment decisions and more information about HIV treatment options
- Providers should endeavor to spend more time with our minority patients with HIV, and should spend more of that time listening to the patient

HEA

CULTURAL CONSIDERATIONS: DIVERSIFY THE CLINICAL STAFF

- >> Important to diversify HIV clinical staff
- » Very few HIV physicians are racial/ethnic minorities
- No matter how welcoming an HIV care site is, minority patients will feel even more comfortable if at least a few clinical or peer support staff members are of their own racial/ethnic background

HEALTH MANAGEMENT ASSOCIATES

37

39

CULTURAL CONSIDERATIONS: OPTIMIZING THE RECEIPT OF CARE AND ART

- \gg Minority patients have reported more problems getting the HIV care they needed and have been less likely to receive medications to treat HIV
- » Disparities in receiving ART have persisted
- >> Medical providers should be aware of the data regarding disparities in the receipt of ART

HEALTH MANAGEMENT ASSOCIATES

Should use strategies in the clinical setting to optimize the likelihood that minority patients will be offered, prescribed, and actually take antiretroviral medications.

37

ADH * Sta adl * Be wit the abi * Ne ste der sol

CULTURAL CONSIDERATIONS: ENHANCE ADHERENCE TO TREATMENT

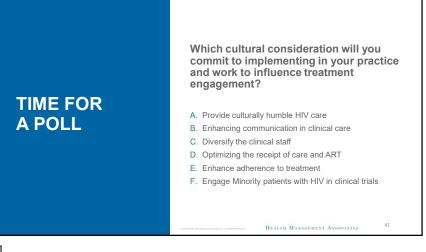

- Stereotypes among HIV care providers that minority patients were less likely to be adherent to ART than were other patients
- Because of this, ART was, at times, withheld from minority patients because of these preconceptions regarding their ability to adhere to it
- » Need to eliminate bias (these biases and stereotypes affect providers' treatment decisions and result in failure to treat some minority patients)

- HEALTH MANAGEMENT ASSOCIATES

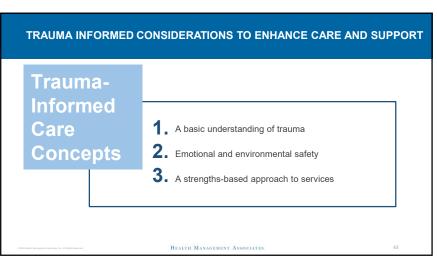

CULTURAL CONSIDERATIONS: MINORITY PATIENTS WITH HIV AND CLINICAL TRIALS

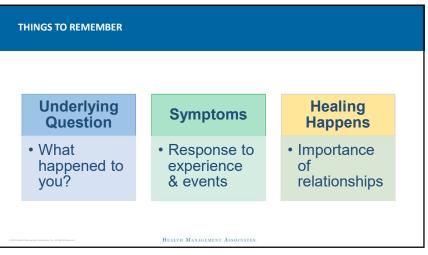

- Minority patients have historically been underrepresented in HIV-related clinical trials, despite their overrepresentation among those living with HIV infection
- >> Legacy of abuses in past research studies, distrust of the health care system broadly, and beliefs regarding conspiracies continue to fuel the HIV epidemic in minority communities
- » There is no easy answer to engaging minorities in clinical trials
- Providers can make efforts to proactively approach all patients about participation in clinical trials and answer their questions/ address any concerns they may have

HEALTH MANAGEMENT ASSOCIATES

TRAUMA INFORMED CARE

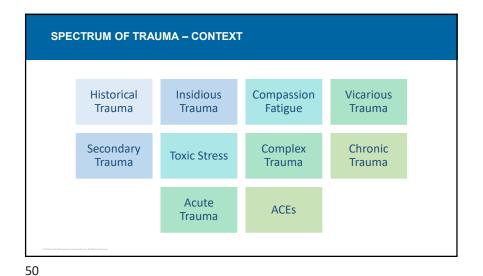

WHAT IS TRAUMA?

https://www.integration.samhsa.gov/clinical-practice

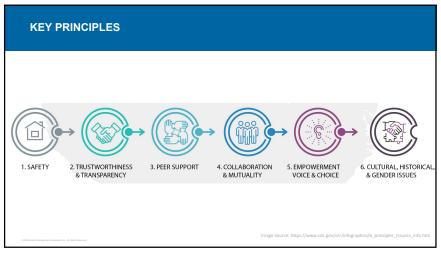

"Individual trauma results from an event, series of events, or set of circumstances that is experienced by an individual as physically or emotionally harmful or life threatening and that has lasting adverse effects on the individual's functioning and mental, physical, social, emotional, or spiritual well-being."

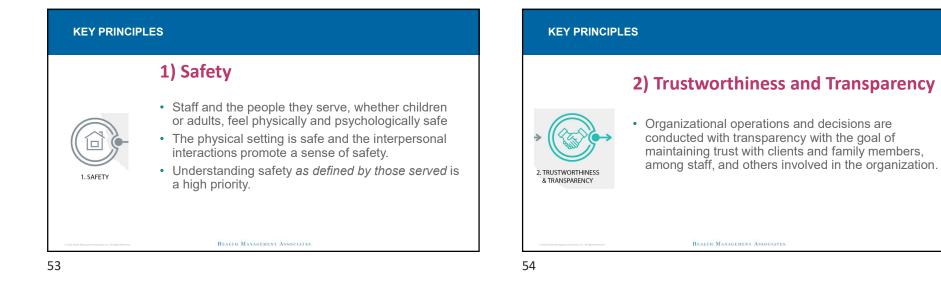

STATED IN ANOTHER WAY (SIMPLE VERSION) "Trauma is anything that overwhelms a person's ability to cope" This Photo by Unknown Author is licensed under CC BY 48

EPIDEMIOLOGY OF SUD DURING PREGNANCY

- >> SAMHSA data: > 400,000 infants are exposed to alcohol and other potential substance of abuse during pregnancy
- >> Number of pregnant women with OUD increased from $1.5/1000 \rightarrow 8.2/1000$ live births (1999-2017)
- » Twenty-seven (27%) percent reported they wanted to cut down or stop using but didn't know how
- >> In MN the prevalence of Neonatal Abstinence Syndrome (NAS) was 10.3/1000 live births (7.3/1000 in US)
- >> Eight percent (8%) of women with OUD/SUD receive needed treatment (most are never screened)

Sources: SAMHSA and I ev on Drug use and Health. 2022

HEALTH MANAGEMENT ASSOCIATES

65

EPIDEMIOLOGY OF HIV DURING PREGNANCY IN THE UNITED STATES

- >> Approximately 8,000 HIV+ women give birth in the US every year and fewer than 50 infants are born with HIV
- >> Transmission of HIV can occur throughout pregnancy, during childbirth and with breastfeeding (Perinatal Transmission)
- $\gg~$ While the US and Europe have experienced steep declines in perinatal HIV transmission (to <1%), African American infants have 5X the incidence of perinatal HIV transmission versus white infants
- In MN the incidence of HIV infected neonates has been ZERO since 2018
- Considerations about approaches to Perinatal Maternal to Child Transmission (PMTCT) prevention vs. treatment approaches

67 HEALTH MANAGEMENT ASSOCIATES

POTENTIAL **EFFECTS OF PERINATAL HIV** AND SUD ON THE BIRTHING **PERSON AND** BABY

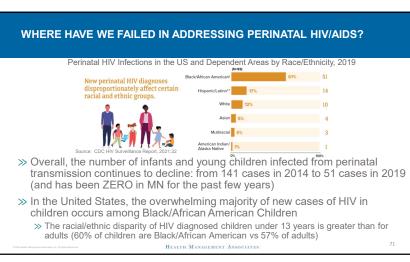

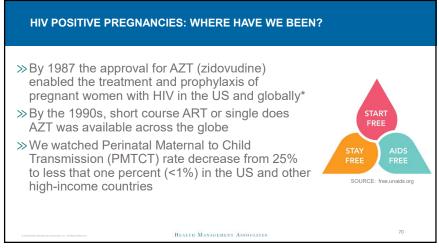

CASE: KAYLA

Kayla is 23-year-old HIV+ woman with a positive pregnancy test during a primary care visit for persistent nausea. Upon examination, Kayla is found to be 11 weeks pregnant. She states the pregnancy was not expected but she wants to keep the child. In response to questions from an evidence-based verbal screening tool, she indicated that she takes both oxycodone and hydrocodone for persistent back pain that resulted from a car accident when she was 19. She is still complaining of back pain and is worried that as the pregnancy goes on, her back pain will worsen. Kayla is mostly compliant with her ART, but occasionally skips her specialty followup visits. She acknowledges that she takes more than the prescribed amounts of opioids. Although concerned her pain may exacerbate during pregnancy, she would like assistance with her opioid misuse and is concerned about the risk of HIV transmission to her infant.

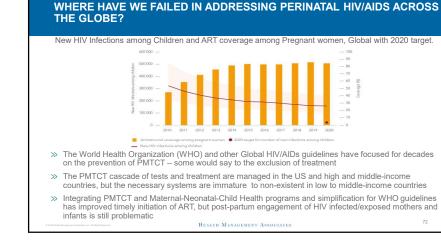

HEALTH MANAGEMENT ASSOCIATES

69

70

IMPORTANT FACTS TO KNOW ABOUT HIV POSITIVITY DURING PREGNANCY AND PERINATAL TRANSMISSION

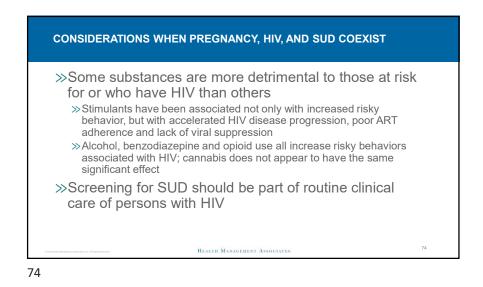

Perinatal Transmissior

HIV infection can be:

- \gg Passed vertically from mom to fetus during pregnancy
- Spread through contact with blood and bodily fluids during childbirth
- » Passed through breastmilk
- Routine HIV screening of all sexually active persons with childbearing potential as early as possible during pregnancy (opt-out)
- Because of disparities in access to screening, prevention and treatment, we should ensure that individuals from other countries receive information during pre-conception counseling and offered screening and treatment

HEALTH MANAGEMENT ASSOCIATES

73

CONSIDERATIONS WHEN PREGNANCY, HIV AND SUD COEXIST (CONT.)

Recommendations for the Use of Antiretroviral Drugs in Pregnant Women with HIV Infection and Interventions to Reduce Perinatal HIV Transmission in the United States

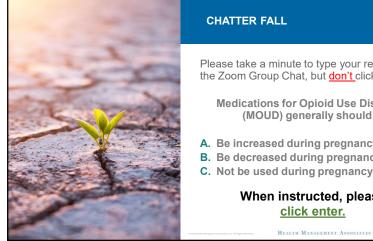

- Individuals on substance use disorder treatment with medications are more likely to initiate and maintain ART regimens
- >> Ongoing SUD is NOT a contraindication to prescribing/using ART >> Use of low risk, easy ART regimens are preferred
- ART agents that inhibit or induce the CYP system (liver enzymes) may interact with methadone and buprenorphine (no such interaction with naltrexone)
- PrEP should always be used for high-risk encounters including during pregnancy and breastfeeding for HIV negative persons

HEALTH MANAGEMENT ASSOCIATES

PERINATAL SUD

Throughout this presentation, the terms "mother" or "maternal" or "she" or "her" are used in reference to the birthing person. We recognize not all birthing people identify as mothers or women. We believe all birthing people are equally deserving of patientcentered care that helps them attain their full potential and live authentic, healthy lives.

HEALTH MANAGEMENT ASSOCIATES

Please take a minute to type your response in the Zoom Group Chat, but don't click enter. Medications for Opioid Use Disorder (MOUD) generally should.. A. Be increased during pregnancy **B.** Be decreased during pregnancy C. Not be used during pregnancy When instructed, please click enter.

77

ADDITIONAL CONSEQUENCES OF OPIOID **USE DURING PREGNANCY**

- >> Fetus exposed to unstable opioid levels
- >> Mother less likely to get prenatal care
- » Fetus & mother more likely to be exposed to morbidity & mortality from IDU & risky behaviors ≫HIV, HCV »Endocarditis, cellulitis ≫Trauma

BASE AND IMPACT

Treatment

Detoxification/ Withdrawal

Methadone

Buprenorphine (Mono)

Buprenorphine/

Naloxone

Naltrexone

Overdose Deaths

BENEFITS OF MOUD USE DURING PREGNANCY

- >> Reduced complication of IDU
- \gg Seventy-five percent (75%) less likely to die related to their addiction

Neonatal Abstinence

- >> Improves adherence to prenatal care & addiction
- >> Safer and healthier communities
- >> Reduced cravings

SUBSTANCE USE DISORDER TREATMENT WITH MEDICATIONS: EVIDENCE-

Pregnancy

Retention in Treatment

Substance Use Disorder Treatment with Medications is the standard of care for the treatment of pregnant women with OUD

HEALTH MANAGEMENT ASSOCIATES

- >> Reduced illicit opioid use
- >> Reduced OD events
- >> Reduced criminal behavior
- >> Reduced risk of obstetric complications

HEALTH MANAGEMENT ASSOCIATES

>> Baby M was born in February 2019 >> Initially ambivalent, Kayla warmed to the idea of being a mom >> Mom is HIV+ (adherent on ART) with undetectable viral load 1 week prior to delivery. She has not been adherent with buprenorphine and has continued intermittently using pressed opioid pills and occasional alprazolam >> Total infant stay was 28 Days >> Total morphine need was: >> 50.6 mg total >> 18.7 mg/day >> 2.3 mg/dose >> Infant stayed on 4 different hospital units >> Kayla felt judged, inadequate and powerless

ged, inadequate and poweriess

CRITICALLY APPRAISING THE LITERATURE ON PERINATAL SUBSTANCE

>> Science is always in search of the gold standard

CASE STUDY: KAYLA'S NEWBORN

- » Historic studies were mostly retrospective and observational
- » Many confounding factors
- » What about the study hypotheses and comparisons
- » Much has been pronounced about outcomes regarding perinatal substance exposure
- >> Understand the limitations
 - > The attribution (causation) problem
 - >> Inconsistent diagnostic criteria/definitions, measures (tools)
 - $\gg\,$ Which is the right comparison group (as we assess effects of substance use disorder treatment with medications)
 - >> Small numbers
- >> About common sense
 - » Most drugs we're discussing readily cross the placenta
 - » Does common sense override reality?

HEALTH MANAGEMENT ASSOCIATES

CRITICALLY APPRAISING THE LITERATURE ON PERINATAL SUBSTANCE EXPOSURE: SCIENCE, CONTEXT AND COMMON SENSE

- >> Psychomotor development
 - » Mixed results on effects of Methadone @18 and 36 mos.
- >> Cognitive and achievement
 - » One meta-analysis (2014) revealed "trends" but no significant difference in memory and cognition
 - » Older and more recent studies (including substance use disorder treatment with medications as exposure) demonstrate significant difference in IQ, academic performance
- >> Language difficult to tease out of analyses
- >> Socio-emotional

Picture from Admin of Children and Familie

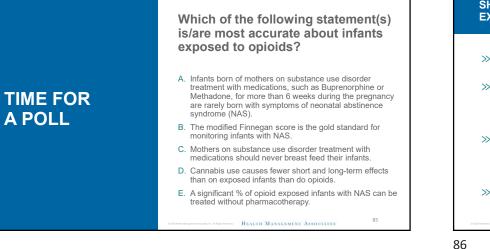

» Recent study demonstrates *frisk* of anxiety, emotional disturbance, autism; and twice as likely to have ADHD, conduct or adjustment disorder

- >> Brain organization
 - $\gg \downarrow$ Brain growth (animal studies)
 - » Neurotransmitter studies infrequent and mixed results
- » NAS/Neonatal Withdrawal Syndrome (NWS) in 50-80% of exposed infants Proto Source: Tuesday Tempation on UR

BEALTH MANAGEMENT ASSOCIATES

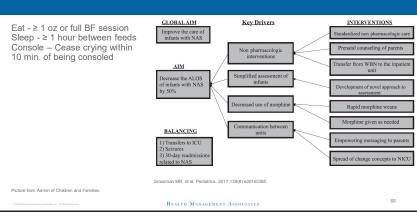

85

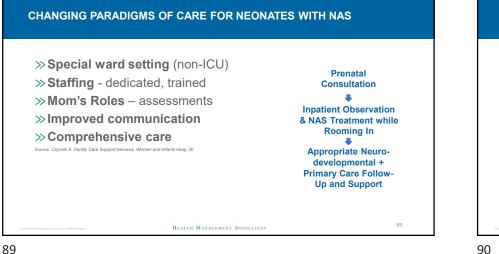

NEONATAL ABSTINENCE SYNDROME (NAS): HOSPITAL CARE

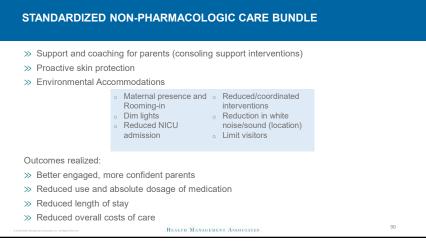

- » NAS may not be recognized (occurs in 50-80% of exposed infants)
- ≫ Goals
 - >> Optimize growth and development
 >> Minimize negative outcomes
 - Support secure attachment and postdischarge
 - >> Opportunity for health and wellbeing
 >> Reduce lengths of stay and treatment*
- >> Having a protocol for identification and management is critical
- >> Historic approaches to management are giving way to new paradigms

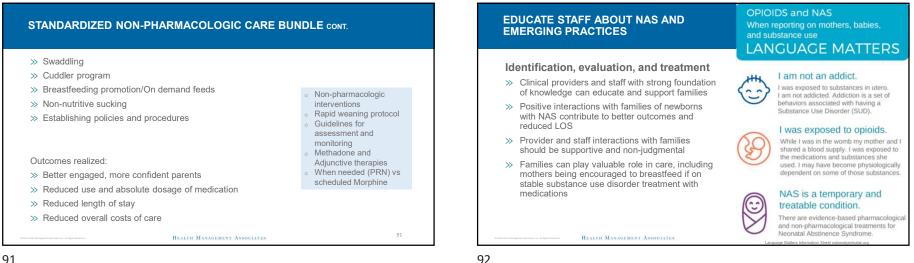

HEALTH MANAGEMENT ASSOCIATES

CHANGING PARADIGMS OF CARE FOR NEONATES WITH NAS

EMPOWERING MESSAGES TO PARTNERS

"On the inpatient unit, we explained that our firstline and most important treatment would center around measures to comfort the infant and that these should be performed by a family member. Parents were told that they were the treatment of their infants and must be present as much as possible. Nurses and physicians focused on supporting and coaching parents on the care of their infants."

Mothers who have questions about breastfeeding or who want to breastfeed should receive patient-centered, evidence-based information and counseling on infant feeding options, including ways to reduce the risk of HIV transmission through breast milk including:

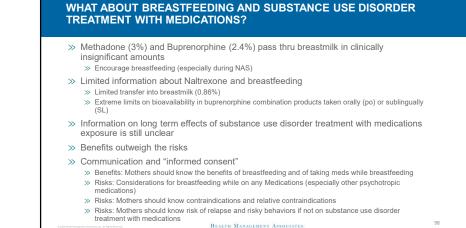

BREASTFEEDING GUIDANCE FOR PEOPLE WITH HIV – NIH AND CDC, 2023

- Replacement feeding with properly prepared formula or pasteurized donor human milk from a milk bank eliminates the risk of postnatal HIV transmission to the infant.
- Achieving and maintaining viral suppression through ART during pregnancy, delivery, and postpartum
 decreases risk of transmission through breastfeeding to less than 1%, but not zero.
- » If mothers choose to breastfeed, providers should emphasize the importance of adherence to ART.
- » Mothers with HIV who choose to breastfeed should receive close follow-up
- Healthcare providers are encouraged to consult the National Perinatal HIV/AIDS Hotline (1-888-448-8765) if they have questions regarding mothers with HIV who want to breastfeed.

SAMPLE SCRIPT FOR ADDRESSING MARIJUANA USE AND BREASTFEEDING SANTA CLARA VALLEY MEDICAL CENTER Importance of highlighting the benefits of breastfeeding and education of families, context is in caring for the mother and baby as a whole ... Marijuana script excerpts Marijuana, also known as "weed" or "pot" is now legal in California for adults over 21. But this doesn't mean it's safe for pregnant or breastfeeding moms or babies. THC in marijuana gets into breast milk and may affect your baby's brain and development ... Secondhand marijuana smoke is also bad for your baby. Marijuana smoke has many of the same chemicals as tobacco smoke. Some of these chemicals may cause cancer or Sudden Infant Death Syndrome (SIDS). Don't allow anyone to smoke anything in your home or around your baby... If you choose to smoke, it is really important to have someone who is not under the influence watching your baby. And be sure to keep marijuana, including edibles, out of reach of children. Given the concerns about possible effects on your baby's brain and development, we recommend not smoking narijuana or using marijuana edibles while you are breastfeeding. 100 HEALTH MANAGEMENT ASSOCIATES

WHICH OF THE FOLLOWING STATEMENT(S) IS/ARE MOST ACCURATE ABOUT INFANTS EXPOSED TO OPIOIDS? - THE ANSWER

- A. Infants born of mothers on substance use disorder treatment with medications, such as Buprenorphine or Methadone, for more than 6 weeks during the pregnancy are rarely born with symptoms of neonatal abstinence syndrome (NAS).
- B. The modified Finnegan score is the gold standard for monitoring infants with NAS.
- C. Mothers on substance use disorder treatment with medications should never breast feed their infants.
- D. Cannabis use causes fewer short and long-term effects than on exposed infants than do opioids.
- E. A significant % of opioid exposed infants with NAS can be treated without pharmacotherapy.

ACCESSING, OBTAINING, AND INTEGRATING SERVICES IN MN

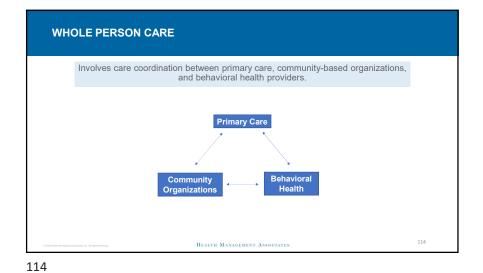

110

109

ACCESSING, OBTAINING, AND **INTEGRATING SERVICES IN MN**

Understand and explain Describe the continuum Be able to list at least 3 Discuss the importance the key concepts of of recovery support of linkages, warm whole-person care services for substance handoffs and case rules/regulations in Minnesota use and HIV treatment management for in Minnesota and be retention on a recovery able to list at least 3 path resources for accessing those services 112 HEALTH MANAGEMENT ASSOCIATES

113

CASE MANAGEMENT

Case Management is the tool that health care providers and social service organizations can use to coordinate their efforts.

A case management approach

- » Recognizes that satisfying such basic needs as general health and adequate housing and food when an individual has SUD can be overwhelming
- » SUD symptoms will impair a person's ability to gain access to formalized system of services
- » Should be utilized in dealing with the multiple problems presented by HIV in combination with SUD
- » Promotes teamwork among the various providers
- » Linkages can greatly benefit the client and improve care

HEALTH MANAGEMENT ASSOCIATES

115

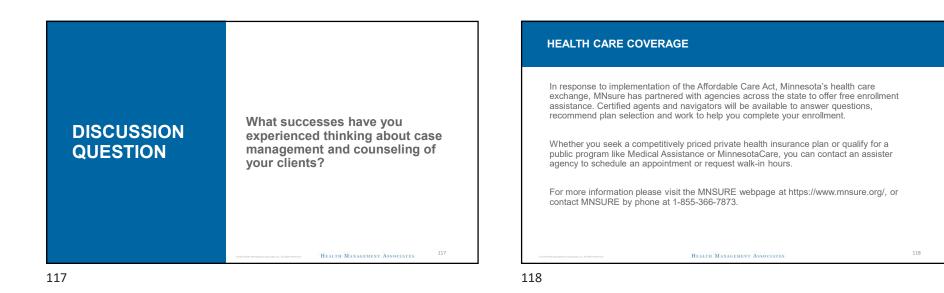

CASE MANAGEMENT AND COUNSELING

Counselors should be knowledgeable about the eligibility criteria, duration of service, and amount of assistance for basic financial assistance programs, including welfare, unemployment insurance, disability income, food stamps, and vocational rehabilitation.

For specific information on economic assistance available in Minnesota visit the Department of Human Services website: http://mn.gov/dhs/.

HEALTH CARE COVERAGE

The Ryan White Care Act provides additional coverage for those living with HIV that may be uninsured or under-insured. For information about Ryan White Programs in Minnesota please visit the Minnesota Department of Human Services webpage: https://mn.gov/dhs/people-we-serve/seniors/health-care/hiv-aids/programs-services/

2024 MINNESOTA STATUTES – SUBSTANCE USE TREATMENT

2024 Minnesota Statues:

https://www.revisor.mn.gov/statutes/cite/245G/pdf

Service Initiation

The license holder must complete an initial services plan within 24 hours of the day of service initiation.

The plan must be person-centered and client-specific, address the client's immediate health and safety concerns, and identify the treatment needs of the client to be addressed during the time between the day of service initiation and development of the individual treatment plan.

HEALTH MANAGEMENT ASSOCIATES

119

HEALTH MANAGEMENT ASSOCIATES

2024 MINNESOTA STATUTES – SUBSTANCE USE TREATMENT

Comprehensive Assessment and Assessment Summary

A comprehensive assessment of the client's substance use disorder must be administered face-to-face by an alcohol and drug counselor within five calendar days from the day of service initiation for a residential program or by the end of the fifth day on which a treatment service is provided in a nonresidential program. The number of days to complete the comprehensive assessment excludes the day of service initiation. If the comprehensive assessment is not completed within the required time frame, the person-centered reason for the delay and the planned completion date must be documented in the client's file.

The comprehensive assessment is complete upon a qualified staff member's dated signature. If the client received a comprehensive assessment that authorized the treatment service, an alcohol and drug counselor may use the comprehensive assessment for requirements of this subdivision but must document a review of the comprehensive assessment and update the comprehensive assessment as clinically necessary to ensure compliance with this subdivision within applicable timelines. An alcohol and drug counselor must sign and date the comprehensive assessment review and update.

HEALTH MANAGEMENT ASSOCIATES

121

2024 MINNESOTA STATUTES – SUBSTANCE USE TREATMENT Individual Treatment Plan Each client must have a person-centered individual treatment plan developed by an alcohol and drug counselor within ten days from the day of service initiation for a residential program, by the end of the tenth day on which a treatment session has been provided from the day of service initiation for a client in a nonresidential program, not to exceed 30 days. Opioid treatment programs must complete the individual treatment plan within 21 days from the day of service initiation 122 HEALTH MANAGEMENT ASSOCIATES 122

2024 MINNESOTA STATUTES – SUBSTANCE USE TREATMENT

245G.07 Treatment Service: A licensed residential treatment program must offer the treatment services in clauses (1) to (5) to each client, unless clinically inappropriate and the justifying clinical rationale is documented. A nonresidential treatment program must offer all treatment services in clauses (1) to (5) and document in the individual treatment plan the specific services for which a client has an assessed need and the plan to provide the services:

(1) individual and group counseling to help the client identify and address needs related to substance use and develop strategies to avoid harmful substance use after discharge and to help the client obtain the services necessary to establish a lifestyle free of the harmful effects of substance use disorder:

(2) client education strategies to avoid inappropriate substance use and health problems related to substance use and the necessary lifestyle changes to regain and maintain health. Client education must include information on tuberculosis education on a form approved by the commissioner, the human immunodeficiency virus according to section 245A.19, other sexually transmitted diseases, drug and alcohol use during pregnancy, and hepatitis;

HEALTH MANAGEMENT ASSOCIATES.

123

121

2024 MINNESOTA STATUTES – SUBSTANCE USE TREATMENT

245G.07 Treatment Service

(3) a service to help the client integrate gains made during treatment into daily living and to reduce the client's reliance on a staff member for support;

(4) a service to address issues related to co-occurring disorders, including client education on symptoms of mental illness, the possibility of comorbidity, and the need for continued medication compliance while recovering from substance use disorder. A group must address co-occurring disorders, as needed. When treatment for mental health problems is indicated, the treatment must be integrated into the client's individual treatment plan; and

(5) treatment coordination provided one-to-one by an individual who meets the staff qualifications in section 245G.11, subdivision 7.

HEALTH MANAGEMENT ASSOCIATES

CONTINUITY OF CARE-CROSS SECTOR TRANSITION

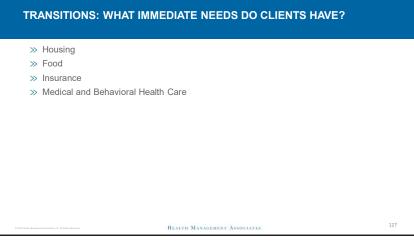

Transitions of care should happen seamlessly throughout the SUD eco-system

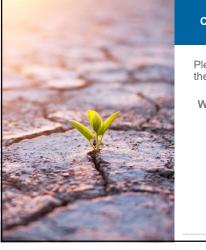

- >> Emergency Department/Hospital
- >> Detox / Sobering Centers
- >> Increase/decrease in level of care intensity (residential, intensive outpatient, outpatient)
- >> Psychiatric care
- >> Primary and specialty care (including ObGyn)
- >> Incarceration
 - » Opportunity for in reach into incarcerated settings » Telehealth visits ≫ In person
